STL files, a powerful part modeling tool, and a powerful CAM tool for creating and cutting parts. Aspire provides an intuitive user interface (UI) for drafting, simple 3D CAD, and powerful part modeling. These two tools work together well. Aspire can be used with CAM-Cut-Power technology to have a sophisticated cutting system in your machine. The software can be used for short-run prototyping and short-run manufacturing. Users can create as many parts as they need, including designing around tight tolerances and using features for complex mold insert holes. Many useful CAD functions are not available in Aspire. The interface is a bit cluttered. So we cannot create a perfect result for every scenario. But the software is powerful and flexible, and we recommend it for many types of manufacturing scenarios. It is a great choice for this book. CAM-Cut-Power Technology

The Aspire package is equipped with a cutting machine that can be equipped with a variety of tools. Aspire offers CAM-Cut-Power technology, which lets you import the design into the machine and send it to the router for high-precision cutting. Figure 12.3 shows some of the machine features. This machine can cut an inch of material in 2 to 4 minutes. It is highly precise and reliable, with a low error rate. Figure 12.3 Some of the machine features. Aspire and the CNC Router The Aspire CNC package supports many of the standard CNC applications, and some new ones. You can create and import STL files, create 2D drawings of the parts you create, and cut them with your CNC router. These tools work together very well, so it is a perfect package for CNC work. Aspire offers support for a variety of machine features: CAM software, toolpaths, and cutting jobs 3D part modeling CAM-Cut-Power technology for high precision Workpiece modeling Programming support Proximity and tracker software Feedforward and feedback to the machine Plan-O-CNC, which allows you to create and import STL files directly into the machine Part models Layout software Steel shape cut Aspire can import standard and custom G-code, including the new NEMA-P14 and the old AS-10 formats. If you use a different programming format, 82157476af
