rar? 3 - What version of CCcam need to install For iPad? 4 - How can do it for IPS in Apple ? First of all, thanks for your incredible blog! My goal is to follow the path you described in the original post to download all the needed tools and set them up properly. If i click on the CCcam files, the next window shows the ““ installation”” button with a green icon. After pressing it, nothing happens and nothing appears in the next window. What can I do to follow the steps described in the post? To correctly install the application, you need to copy the files (or the link to the files) in the following folder:

Download the zip archive from the link provided above, rename it to “OpenXCAS” and drag it to the IOS SDK folder on your computer. Then, select the version (1.3.2) for a universal application in the installed tab, or 2.2 for a iPad application. Hope it helps! Note: If you get error while trying to run the app, select your iPad version then on the project tab, select “Deployment Info” and then “Build Settings” and select the “Archive” from the option “Valid Architectures”. Hello, how do I install the.ipa file? My OS is a Mac. I want to install it on the iPad. Is there a way to install it? I'm trying to follow the installation steps you provided in the original post but I can't do it. Thanks. With iPhone, iPad, iPod and Mac, OpenXCAS for Mac and OpenXCAS for iPad need to be installed in the same device (iPad or iPhone). But for Mac, it's possible to install it in the same device with your iPhone, iPod and iPad. i tried to run this application on an iPad 2. I wanted to turn on wifi, but the app was not working. the question is: should I install the

CCcam app or not on an iPad 2, which is not the same as a normal iPhone, iPod and so on?
import { FileType } from './FileType'; import { FileNotFoundError } from './error'; import { Types } from './interfaces'; export class FileNotFoundError
